38612F - Standard Procurement System (SPS)

BACKGROUND:

(U) Previously funded by SAF/AQC. SPS is a standardized contract writing system mandated by OSD. SPS serves as the cornerstone for the DoD End to End Procurement Vision and is approved by the Acquisition Domain Owner for the Business Management Modernization Program.

ADJUSTMENT:

(U) Funds technology upgrades (hardware, specialized servers, and limited software) for 13 MAJCOM sites, training, and support of SPS regionalization.

IMPACTS:

(U) CC IPL: No DPG: Yes SAFETY BOARD: No TF: GM UFR: No

(U) REQUIREMENT: 12 Nov 03 and 25 Jan 02 SAF/AQC letters, Standard Procurement System (SPS) Out-Year Funding Strategy, levied this requirement on the MAJCOMs for programming and budgeting.

- (U) Funds are needed for critical tech refresh to effectively manage the configuration, deployment and operation of SPS versions across MAJCOM until full transition to web-based system; legacy systems need support until incremental data migration is completed (ECD: FY10);

-- (U) Lack of funds for tech refresh will lead to increased hardware failure and severe capability losses with critical mission impact and possible work stoppage in

contracting offices due to hardware and software incompatibility

- (U) Funds are needed to transition MAJCOM from a client-server to the web-based SPS; w/o funds, no single migration path to the new system will exist

- (U) Software upgrades are on an OSD driven schedule; must fund standard configured hardware infrastructure as prescribed by

the IPMO to allow for planned systems upgrades to occur on schedule w/o additional costs or delays
